SPEC NO.: VI101IA14 Date:2022/03/17 Page:12/18

Note 1: Definition of viewing angle range

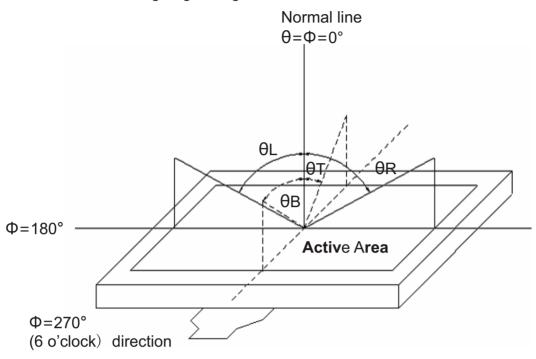

Fig. 4-1 Definition of viewing angle

Note 2: Definition of optical measurement system

The optical characteristics should be measured in dark room. After 30 minutes operation, the optical properties are measured at the center point of the LCD screen. (Response time is measured by Photo detector TOPCON BM-7, other items are measured by BM-5A/Field of view: 1°/Height: 500mm.)

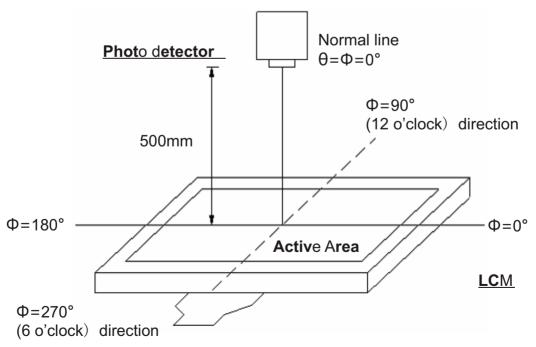

Fig. 4-2 Optical measurement system setup

SPEC NO.: VI101IA14 Date:2022/03/17 Page:13/18

Note 3: Definition of Response time

The response time is defined as the LCD optical switching time interval between "White" state and "Black" state. Rise time (Ton) is the time between photo detector output intensity changed from 90% to 10%. And fall time(toff) is the time between photo detector output intensity changed from 10% to 90%.

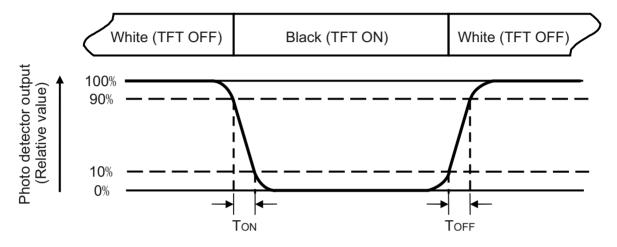

Fig. 4-3 Definition of response time

Note 4: Definition of contrast ratio

Contrast ratio (CR) = Luminance measured when LCD on the "White "state Luminance measured when LCD on the "Black state"

Note 5: Definition of color chromaticity (CIE1931)

Color coordinates measured at center point of L.CD

Note 6: All input terminals LCD panel must be ground while measuring the center area of the panel. The LED driving condition is IL=260mA.

SPEC NO.: VI101IA14 Date:2022/03/17 Page:14/18

Note 7:Definition of Luminance Uniformity

Active area is divided into 9 measuring areas (Refer to Fig. 4-4). Every measuring point is placed at the center of each measuring area.

L-----Active area length W----- Active area width

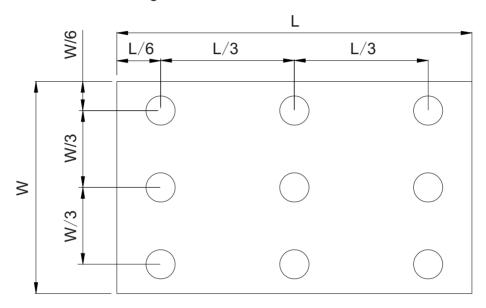

Fig. 4-4 Definition of measuring points

Bmax: The measured maximum luminance of all measurement poition. Bmin: The measured minimum luminance of all measurement poition.

6.General Precautions

6.1. Safety

Liquid crystal is poisonous. Do not put it in your mouth. If liquid crystal touches your skin or clothes, wash it off immediately by using soap and water.

6.2. Handling

- 1. The LCD panel is plate glass. Do not subject the panel to mechanical shock or to excessive force on its surface.
- 2. The polarizer attached to the display is easily damaged. Please handle it carefully to avoid scratch or other damages.
- 3. To avoid contamination on the display surface, do not touch the module surface with bare hands.
 - 4. Keep a space so that the LCD panels do not touch other components.
- 5.Put cover board such as acrylic board on the surface of LCD panel to protect panel from damages.
- 6.Transparent electrodes may be disconnected if you use the LCD panel under environmental conditions where the condensation of dew occurs.
 - 7.Do not leave module in direct sunlight to avoid malfunction of the lcs.

6.3. Static Electricity

- 1.Be sure to ground module before turning on power or operating module.
- 2.Do not apply voltage which exceeds the absolute maximum rating value.

6.4. Storage

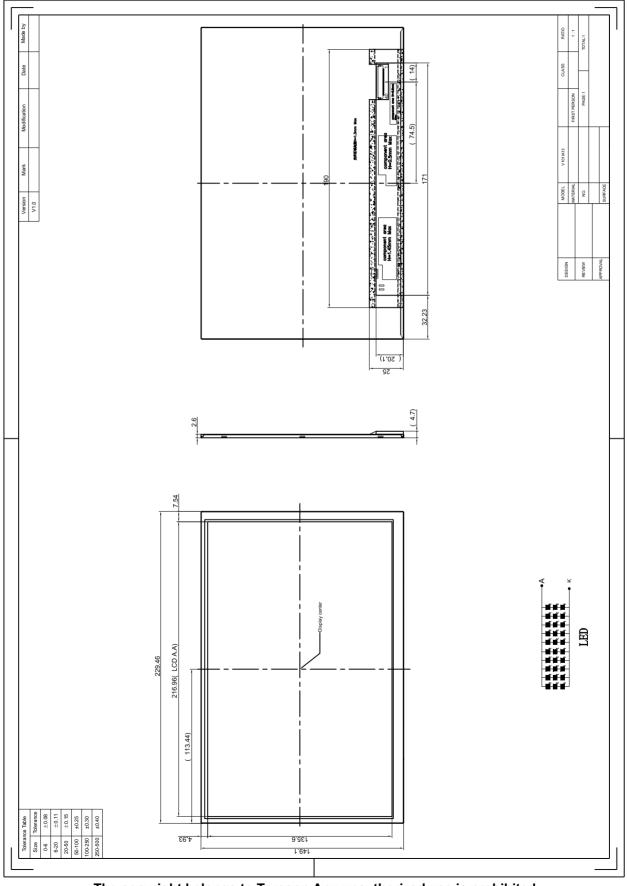

- 1.Store the module in a dark room where must keep at $25\pm10^{\circ}\text{C}$ and 65%RH or less.
- 2.Do not store the module in surroundings containing organic solvent or corrosive gas
 - 3. Store the module in an anti-electrostatic container or bag.

6.5. Cleaning

- 1.Do not wipe the polarizer with dry cloth. It might cause scratch.
- 2.Only use a soft sloth with IPA to wipe the polarizer, other chemicals might permanent damage to the polarizer.
